PROFESSIONAL SUMMARY

Computer Science senior at Florida Atlantic University graduating Fall 2026 with a passion for building intelligent software systems, AI-powered applications, and scalable backend solutions. Experienced designing Python applications, REST APIs, modern web applications, and machine learning projects through independent development and collaborative software engineering. Seeking an entry-level Software Engineer position focused on AI, backend systems, or full-stack development.

TECHNICAL SKILLS

Languages: Java, Python, C++, JavaScript, SQL, HTML, CSS
Frameworks & Technologies: Next.js, React, Flask, SQLAlchemy, Tailwind CSS
Databases: SQLite, Relational Database Design, SQL, Data Modeling
Software Engineering: OOP, Data Structures & Algorithms, SDLC, Git, GitHub, Vercel, Rest APIs, JWT
AI & Data: Artificial Intelligence, Ollama, Faster-Whisper, Streamlit, FAISS, Machine Learning, Deep Learning
Cybersecurity: Network Fundamentals, Authentication & Authorization, Security Engineering
Systems: PC Assembly, Server Assembly, Hardware Diagnostics, Technical Troubleshooting, Windows

PROJECTS

JARVIS AI Platform | Personal AI Assistant | Agent Framework | Independent Project | https://github.com/CPruett24/jarvis-ai-platform
•Developed a local-first AI assistant using Python, Ollama, Faster-Whisper, SQLite, and Streamlit.
• Implemented voice interaction with wake-word detection, speech recognition, and text-to-speech.
• Built persistent memory and conversation context systems using SQLite.
• Created an intent-recognition and command-routing architecture for automation workflows.
• Developed a dashboard for monitoring assistant status, memory, and workspace management.
• Designed the platform for future expansion into autonomous agents, automation workflows, and business operations.

Vehicle AI Diagnostic Assistant | Python | Independent Project | https://github.com/CPruett24/Vehicle-AI-Diagnostic-Assistant
• Designed and developed an AI-powered vehicle diagnostic application featuring a graphical user interface and multiple supporting databases.
• Built diagnostic logic to analyze user-reported vehicle symptoms and generate troubleshooting recommendations.
• Implemented database-driven storage and retrieval of diagnostic information.
• Managed the complete software development lifecycle including architecture, implementation, testing, debugging, and enhancement.

VolunteerHub | Python, Flask, SQLAlchemy, JWT, SQLite | Team Project | https://github.com/j-bridge/volunteerhub.com
• Developed backend functionality for a volunteer-opportunity platform modeled after modern job-search applications.
• Designed SQLAlchemy database models and backend architecture supporting user and organization workflows.
• Developed RESTful API routes and Flask blueprints to support application functionality.
• Implemented role-based authentication and authorization using JSON Web Tokens (JWT).
• Collaborated in a team-based GitHub workflow utilizing version control, testing, and code reviews.

EDUCATION

Florida Atlantic University
Bachelor of Arts in Computer Science with Cybersecurity and AI Minors | GPA: 3.74 | Expected

Graduation: Fall 2026

Eastern Florida State College
Associate in Arts | December 2023 | GPA: 3.89 | Honors Graduate

RELEVANT COURSEWORK

Data Structures & Algorithm Analysis, Design & Analysis of Algorithms, Principles of Software Engineering, Introduction to Artificial Intelligence, Introduction to Deep Learning, Introduction to Database Structures, Communication Networks, Foundations of Cybersecurity, Introduction to Data Science Analytics, Introduction to Web Programming, Computer Logic Design.
Upcoming: Artificial Intelligence for Cybersecurity, Introduction to Data Mining & Machine Learning, Mobile App Projects, Security Engineering with Generative AI.

PROFESSIONAL EXPERIENCE

Contec Americas — Electronics Assembler / Summer Intern
Aug 2023–Aug 2024 | May 2025–Aug 2025 | Dec 2025 | May 2026–Current

- Assembled computers, servers, monitors, and specialized electronic systems by following engineering specifications, work instructions, bills of materials (BOMs), and production documentation.
- Verified component part numbers, hardware configurations, and assembly requirements against engineering drawings, technical schematics, and Bills of Materials to ensure accurate product configuration.
- Performed functional testing, inspection, and quality verification of completed assemblies using electronic testing equipment, diagnostic tools, and established manufacturing procedures to confirm product performance.
- Utilized Electrostatic Discharge (ESD) controls, including grounded wrist straps, ESD-safe workstations, and protected handling procedures to safeguard sensitive electronic components throughout the manufacturing and testing process.
- Performed quality inspections by cross-referencing completed hardware assemblies against engineering documentation and customer specifications, documenting non-conforming materials and supporting corrective action processes.
- Used **NetSuite** to access work orders, production documentation, Bills of Materials, inventory information, and manufacturing records while accurately documenting production activities and maintaining traceability throughout the assembly process.
- Supported work-order kitting operations by organizing and preparing components, accessories, and materials required for efficient production builds.
- Packaged and prepared completed computer systems and electronic equipment for shipment while ensuring proper configuration, documentation, and quality standards were maintained.
- Worked within ISO 8 anteroom and ISO 7 cleanroom environments while adhering to contamination-control procedures, PPE requirements, and manufacturing quality standards.
- Participated in Kaizen events and continuous improvement initiatives focused on improving manufacturing efficiency, product quality, and standardized production processes.
- Selected for multiple rehire periods and internship opportunities based on technical aptitude, reliability, quality of work, and ability to contribute across assembly, testing, quality assurance, kitting, and packaging operations
